

SaaS Security Scanner S4 for Salesforce

Security compliance and assurance for Salesforce

S4 assists in Japanese APPI compliance of your Salesforce Cloud

Compliance Requirement

S4 Control

Security Control Measure

Take necessary measure for prevention of data leakage, loss, or damage, and for other security control of the personal data (APPI Article 20)

Identifies Security Vulnerabilities

S4 identifies security vulnerabilities which impact data security for administrator to take appropriate measures

Access Control

Data access control by designed and implemented to limit access of personal data to only the permitted personnel and system (PCC Guideline Appendix 8-6-1,2)

Pinpoints Data Access Issues

By static source code review and cloud security configuration review, S4 pinpoints data access issues which make a Salesforce deployment insecure by design

Penetration Prevention

Implement and operate penetration preventative measure to safeguard from personal data theft (PCC Guideline Appendix 8-6-3,4)

Performs Penetration Testing

S4 reviews static source code for penetration vulnerability and has Interactive runtime testing to perform penetration testing, automatically.

Cross border 3rd-Party Safeguards

Transfer personal data to a third-party and third-party country only if the controller has provided appropriate safeguards (APPI Article 3-4 & Supplementary Rules under APPI for the Handling of Personal Data Transferred from the EU and the United Kingdom)

Reviews Third Party Integrations

S4 finds and reviews third party integrations with Salesforce that can adversely impact data security.
